Create your CPD Courses, Webinars, and Events

Move your CPD online and build online courses, modules, and e-Books. Have your members register for face-to-face events, or online webinars. Integrate e-Commerce and start generating revenue from your training activities.

Add CPD Training Groups

Create training groups and assign courses, training programs and competency profiles. Assign a manager and import learners to each group. Communicate with learners in training groups with announcements, links, and resources that relate to each group.

Publish Profiled CPD News and Documents

Publish RSS announcements directly to your learners' dashboards. These can be profile-based to provide personalised communication. Offer documents and resources for your learners to download, and map these to the specific training profile.

Deliver CPD Certificates

Deliver personalised course-completion certificates in A4 or business card format, complete with your corporate logo, style guide, and colours. Customise the certificate with fields, including the learner's name, your business name, the name of the course, the date of completion, and the number of CPD points attained.

Generate CPD Reports

Create dynamic reports on your PowerCPD data. The unrivalled reporting options include:

- administration reports on all groups, courses, and assessments,
- manager reports on a specific group accessed from the front end, and
- integrated reporting to your existing databases using PowerCPD and webservice.
